

Seneca Global Income & Growth

Mind the (inflation) gap!

Seneca Global Income & Growth Trust's (SIGT's) manager, is gradually reducing the trust's equity weighting over the next couple of years, in advance of a global recession it expects in 2020. Consistent with its view, the recent trend in developed economies has been one of falling unemployment, labour markets tightening, wage rates edging up and emerging signs that consumer prices are also on the rise. SIGT's manager expects inflation to continue to rise, triggering a response from central banks, including in some cases, interest rate rises and ultimately recession. SIGT has recently underperformed its benchmark and global equity markets (see page 10), but its manager expects its multi-asset strategy to strongly outperform these in the downturn.

Multi-asset, low volatility, with yield focus

Over a typical investment cycle, SIGT seeks to achieve a total return of at least the Consumer Price Index (CPI) plus 6% per annum, after costs, with low volatility, and with the aim of growing aggregate annual dividends at least in line with inflation. To achieve this, SIGT invests in a multi-asset portfolio that includes both direct investments (mainly UK equities) and commitments to **open-and-closed-end** funds (overseas equities, fixed income and specialist assets). SIGT's manager uses yield as the principal determinant of value when deciding on its tactical asset allocation and holding selection.

Manager's view

Reducing equity exposure in anticipation of a global recession in 2020

Equity exposure is reducing by 1% every couple of months.

As discussed in all of QuotedData notes since June 2017, Seneca Investment Managers (Seneca IM) has set out a clear 'road map' for SIGT's equity weighting and how this will be reduced over the next couple of years. Specifically, SIGT's equity exposure is being decreased by 1% every couple of months (give or take, depending on market conditions) in advance of a global recession that Peter Elston (the research specialist for asset allocation) anticipates in 2020. He expects to see a global equity bear market commencing in advance of this, starting at some point in 2019, and aims for SIGT to be meaningfully underweight equities at this time, as it is during the peak phase (the top of the cycle) that equities provide the worst performance. As discussed in the asset allocation section (see page 5), since setting out its intentions, Seneca IM has been sticking to its plan.

Recent economic data reinforces the manager's view

The manager believes that the global economy is approaching the end of its expansionary phase.

Peter Elston tell us that, since QuotedData last published in June of this year, Seneca IM's strategy remains unchanged. Furthermore, his analysis of events since, has served to reinforce this view that the global economy is approaching the end of its expansionary phase (the phase of the business cycle when the economy moves from a trough to a peak, business activity increases and gross domestic product (GDP) expands until it reaches a peak).

The 'mechanics' underlying Peter's strategy have been covered in detail in QuotedData previous notes (for example, please see pages 5 and 6 of [QuotedData's June 2018](#) note for a more in-depth discussion) but, to summarise, developed markets and economies are in an expansion phase. Inflation is picking up which will lead to central banks tightening monetary policy (for example by raising interest rates), which will act as a brake on the economy, causing it to contract. Looking at Figure 3, there is evidence that inflation is picking up.

Developed markets and economies are in an expansion phase

Peter believes that developed economies are, on average, in an expansion phase. History suggests that it is during this phase that inflation starts to take hold, rising above central-bank targets. This causes central banks to react, tightening monetary policy by raising interest rates and, in some cases, curbing lending. The US has been in this phase for over two years. It has ended its quantitative easing programme (where it was buying bonds to free up cash for banks to lend) and has been raising interest rates. While US inflation reduced in the early part of 2017, it is now on the rise again and therefore it is likely that the US Federal Reserve will continue to tighten.

The US has been tightening monetary policy for two years and the UK has now seen its second rate rise since the financial crisis.

August 2018 saw the Bank of England raise UK interest rates for the second time since the financial crisis. This second rise follows quite quickly on the heels of the first in November 2017 (the previous move, in August 2016 was a 0.25% reduction in the aftermath of the EU referendum). These rises have taken place on the back of rising inflation (partly driven by the sterling weakness in the aftermath of the Brexit vote that

caused the cost of imported goods to rise); nonetheless, the economy is close to full employment and continues to grow. There are concerns that this inflation is becoming entrenched, which has led to the recent rises, with the potential for further adjustments in due course.

Tightening monetary policy is a warning sign

A simple yet effective way to keep track of the cycle, and therefore add value through tactical asset allocation, is to keep a close eye on monetary policy.

The manager says that it is during the expansion phase that returns from equity markets start to fall (it believes that equity returns tend to be best in recession phase, second best in recovery phase, then slightly lower, but still positive in the expansion phase). Peter says that a simple yet effective way to keep track of the cycle, and therefore add value through tactical asset allocation, is to keep a close eye on monetary policy. Specifically, a key warning sign for equity markets is when monetary policy has been tightening for a prolonged period, and the yield curve inverts. This arguably signifies the end of the expansion phase.

An inverted yield curve means that monetary policy is tight and so there is likely to be some sort of decline in economic activity.

An inverted yield curve means that monetary policy is tight and so there is likely to be some sort of decline in economic activity. Peter says that, in the US, the last five recessions have been presaged by an inverted yield curve and that an inverted yield curve (in the US) has always led to a recession. Peter therefore values this as a strong leading indicator. He wants SIGT to be heavily underweight equities by the time we move to the peak phase, which he thinks will be in about two years from now. (Note: an inverted yield curve is an interest rate environment where long-term debt instruments have a lower yield than short-term debt instruments of the same credit quality.)

Unemployment continues to fall leading to wage pressure

As illustrated in Figure 1, the broad trend across developed markets is one of unemployment continuing to fall (a similar pattern is seen in emerging markets although Brazil has been a marked exception). Peter believes that, with unemployment now close to 50-year lows, tight labour markets are leading to increasing pressure on wages to rise. This should manifest itself as wage inflation (see Figure 2 where Japan is already showing signs of wage inflation).

Figure 1: Unemployment rate (%)

Source: Bloomberg

Peter cautions that he is not expecting to see a massive spike in inflation this year but observes that, as illustrated in Figure 3, for much of the developed world, inflation is much higher than it was three years ago (Japan with its pernicious low inflation is the obvious exception, despite the significant stimulus applied by Abenomics – the economic policies advocated by Shinzō Abe, Prime Minister of Japan. It is based upon "three arrows" of monetary easing, fiscal stimulus and structural reforms).

Peter says that inflation management is similar to ‘turning an oil tanker’. He believes that if the authorities are to stop inflation pressures building up in the system, they need to be acting now. The counter argument that some commentators have put forward is that the developed world, with its ageing population, stretched government finances and limited negotiating power of labour could be stuck in a Japan-style deflationary spiral. (A deflationary spiral is a situation where decreases in price lead to lower economic output, which in turn leads to lower wages and demand, which leads to further price reductions.)

Figure 2: Wage rates indices year-on-year change (%)

Source: Bloomberg

Figure 3: Consumer price index year-on-year change (%)

Source: Bloomberg

Figure 4: US yield differential (10-year government bond yield less two-year government bond yield)

Source: Bloomberg

Figure 5: UK yield differential (10-year government bond yield less two-year government bond yield)

Source: Bloomberg

Figures 4 and 5 show how the gap between the yields on 10-year and two-year government bonds has changed over time. Figure 4 has data on the US and Figure 5 shows the UK. As the gap narrows, the yield curve (the graph of how yields on government bonds varies by time to redemption) is flattening. If either of the lines on Figures 4 or 5 dipped below zero, the yield curve would have inverted (short term debt would be paying more than long term debt).

Asset allocation

One per cent reduction in equity exposure every couple of months

The manager is aiming for SIGT to be significantly underweight equities by 2020.

The team at Seneca IM set out its intention, in mid-2017, to reduce SIGT's allocation to equities during the next few years with the aim of being significantly underweight by 2020. (QuotedData first commented on this in its [update note of 13 June 2017](#) and has commented on the progress made in every note since.) This process has continued since QuotedData published its [annual overview note in June 2018](#). The key changes are as follows:

- A 1% reduction in SIGT's equity weighting at the end of May. This comprised a 1% reduction in SIGT's allocation to UK equities; a 1% reduction in the allocation to overseas equities (taken entirely from SIGT's allocation to Europe); a 1% increase in the allocation to the Insight Equity Income Booster Fund; and cash also increased by 1%.
- A 1% reduction in SIGT's direct UK equity holdings at the end of July. The proceeds of this were split between the Insight fund and corporate bonds.

May's 1% reduction in the UK equity allocation was largely achieved by exiting SIGT's holding in Victrex (discussed overleaf). The manager also made small trims to a couple of other positions to complete the reduction. The decision to also take 1% out of Europe and reallocate this to the Insight fund to maintain the overall equity allocation reduction at 1% was slightly unusual. However, SIGT's manager says that the European Central Bank has been increasingly making reference to ending its quantitative easing programme and the manager felt that it should build this into its asset allocation framework. One half of a per cent was taken from the holding in European Asset Trust and one half of a per cent was taken from the Liontrust European Enhanced Income

Fund. SIGT's third European holding, the Invesco Perpetual European Equity Income Fund, was held constant.

Figure 6: Comparison end July 2018 asset allocation, end April 2018 asset allocation and end August 2018 income generation

Source: Seneca IM

July's 1% reduction in the UK equity allocation was achieved by exiting SIGT's holding in Diploma (discussed overleaf). Beyond this, portfolio activity has been limited as would be expected. The biggest change has been the exiting of Custodian REIT, which broadly has funded a 1% allocation to the Hipgnosis Songs Fund (see page 8).

Victrex - sold in its entirety

Figure 7: Victrex share price

Source: Bloomberg

Victrex (www.victrex.co.uk) is a global supplier of high-performance polymer products for the automotive, aerospace, energy (including manufacturing and engineering), electronics and medical markets. It has been a constituent of SIGT's portfolio since January 2016 (commentary on Victrex was provided in [QuotedData's May 2016 note](#) – see pages 6 and 7 of that note) and has returned over 93% since that time. When SIGT initiated its position, Mark Wright, the research specialist for UK equities, took a particularly positive view on the outlook for Victrex's main product PEEK (polyether ether ketone – a semi-crystalline thermoplastic with very good mechanical and chemical resistance properties that are retained at high temperatures, allowing it to be used in a range of demanding environments).

Since SIGT initiated its position, Victrex's share price has undergone a rerating.

Mark said that Victrex had proven to be very successful in finding new applications for PEEK and had invested heavily in operating capacity, which both reduced the need for significant capital expenditure near term and acted as a significant barrier to entry. Mark's thesis appears to have been correct. Since SIGT initiated its position, Victrex's share price has undergone a rerating and it is now more expensive (its [EV/EBITDA](#) multiple has moved up from 11x to 17x while its price-earnings ratio (P/E) has risen to over 22x from 16x).

Mark believes the market is currently pricing in growth of 15-16% per annum for the next 10 years.

Mark believes that the company continues to have strong growth prospects, but he thinks the market is currently pricing in growth of 15-16% per annum for the next 10 years. While not impossible, his view is that this assumption is aggressive - particularly as David Hummel, Victrex's CEO for 30 years has recently retired and the company has recently seen a change of finance director. Victrex's has plans to manufacture semi-finished and finished parts (rather than more basic components such as tubes

and films), which have a higher margin (are more profitable). As this is new territory for the company, there is an element of risk in executing the strategy that is not reflected in current market pricing, in Mark's view. However, SIGT's manager continues to like the company and would consider building a position again should the stock become cheaper.

Figure 8: Custodian REIT share price

Source: Bloomberg

Custodian REIT - sold in its entirety

Custodian REIT (www.custodianreit.com) is a London-listed real estate investment trust that invests in UK commercial property let to institutional-grade tenants (larger high-quality tenants) on long leases. It has been a constituent of SIGT's portfolio since November 2015 and has provided a total return in the region of 35% since this time. SIGT's manager says that it likes Custodian's defensive characteristics (it considers Custodian's portfolio to be highly diversified with underlying tenants that are low risk) and thinks that the company is a high-quality property holding that can be held all the way through the business cycle. It says that Custodian REIT is well supported by ongoing demand from clients of Mattioli Woods (the company was established in 2014 with a £95m seed portfolio held by clients of Mattioli Woods and managed by Custodian Capital for the previous 12 years).

However, the company has seen its premium expand over the last six months and so is not as good value as it has previously been (Custodian's premium has expanded from around 5% at the beginning of April 2018 to around 14% today). In addition, when compared to some of its peers, SIGT's manager feels that it not as active in managing its property portfolio. Seneca IM thinks that this will be very important in the late part of the property cycle. (This was an important consideration behind the decision to reintroduce Ediston Property to SIGT's portfolio, towards the end of 2017.) The sale of Custodian largely funded the purchase of Hipgnosis Songs Fund (also a specialist asset within SIGT's asset allocation) which is discussed overleaf.

Figure 9: Diploma share price

Source: Bloomberg

The company has grown very strongly and was an obvious candidate when the team were looking to reduce SIGT's UK equities allocation.

Diploma - sold in its entirety

Diploma (www.diplomaplc.com) operates in three business segments – life sciences, seals and controls. The company has a good track record of growing its sales, around 77% of which are outside the UK, and it has performed well post Brexit, benefitting from sterling's depreciation. SIGT's manager considers it to be a very high-quality business.

The company's March 2018 trading statement was well received by the market and its share price has risen 24.3% since the announcement. The company has also re-rated significantly since SIGT first invested in September 2015 (a return in the region of 125%) and it has become more expensive (EV/EBITDA has increased from 11x to 17x).

Mark Wright thinks that a strong rerating is certainly justified. The company has grown very strongly. Mark believes that, when it announces full-year results for the year ending 30 September 2018, Diploma will have had its strongest two years of organic growth, with the prospect of more to come. However, as an investor whose decisions are driven by relative valuations, Mark considered Diploma to be the obvious candidate for a sale when the team were looking to reduce SIGT's UK equities allocation by 1% at the end of July 2018. Mark was also conscious that, with the departure of Bruce Thomas, Diploma's previous chief executive officer of 20 years, there is the potential for increased execution risk, particularly if Nigel Lingwood, the current finance director also decides to retire. Mark believes that both have been key to Diploma's success over the last 10 years.

SIGT's manager would consider building a position again should Diploma become cheaper.

Figure 10: Hipgnosis Songs Fund share price

Source: Bloomberg

Music streaming services provide a cheap and cost-effective solution for users driving piracy and illegal downloading into terminal decline. Global music-consumption revenues are growing strongly.

Merck Mercuriadis is very well connected in the music industry and has a strong sense of which catalogues to buy – both in terms of income generation and future growth potential.

Despite exiting the position in full, SIGT's manager continues to like Diploma, which has been very profitable for SIGT. It would consider building a position again should the stock become cheaper.

Hipgnosis Songs Fund – SIGT invested at IPO to initiate a position

In an IPO that raised gross proceeds of £200.2m, Hipgnosis Songs Fund (www.hipgnosisongs.com) listed on the specialist fund segment of the London Stock Exchange on 11 July 2018 (ticker: SONG). It is a Guernsey-domiciled investment company established to offer exposure to songs and associated musical intellectual property rights. Once substantially invested, Hipgnosis aims to pay a dividend of 5% per annum (3.5% during the first year), which it also intends to grow, and it is targeting a total NAV return of 10% over the medium term (Hipgnosis' manager earns a performance fee if this hurdle is reached).

SIGT's manager says that, while music revenues have previously been in decline for some 15 years, due to piracy and illegal downloading, these are once again rising strongly. Global music-consumption revenues totalled some \$54bn in 2015 but are expected to be in excess of US\$100bn by 2030 (source: Goldman Sachs, Stairway to Heaven Report October 2016). Seneca IM says that new technology, which allows the expansion of mass consumption, streaming and improved ease of revenue capture, have made this possible.

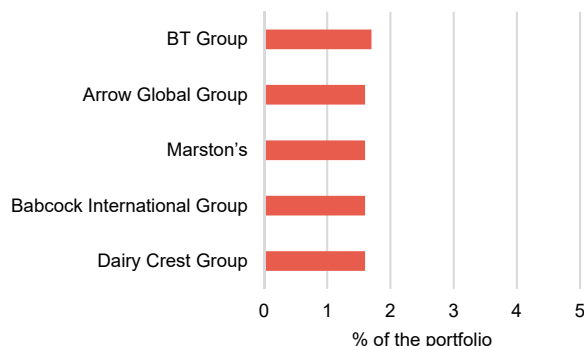

Specifically, the advent of music-streaming services (such as Spotify, Deezer, Amazon Music, Apple Music and Youtube Music to name a few), have provided a cheap and cost-effective solution for music fans. This, coupled with an effective crack down, has meant that users' interest in 'pirated' music has fallen into terminal decline.

Revenue collection, which was previously an archaic and messy process (leakages were extensive and it took considerable time for royalties to accrue to the writer) has been improved dramatically with new technology that scans the globe for music usage and then collects the royalties. Hipgnosis outsources this to Kobalt (www.kobaltmusic.com), a specialist music-royalty-collection and portfolio administration service. Kobalt, which has been operating since 2000, has a platform that monitors nearly every radio station, if not all, in the world. As the largest 'neighbouring rights' administrator in the world, Kobalt has long-established relationships with collection societies, allowing it to collect directly and minimise society commissions.

The fund's investment adviser is The Family (Music) Limited, which was founded by Merck Mercuriadis, a music-industry veteran and former chief executive officer of Sanctuary Records. Seneca IM says that Merck is very well connected in the music industry and has a strong sense of which catalogues to buy – both in terms of income generation and future growth potential. Seneca IM says that Sanctuary had a reputation for signing artists with long-term appeal - usually artists that would now be considered 'heritage' acts that have had a long career and a steady fan base.

Largest investments

Figure 11: Top UK equity positions as at 31 August 2018

Source: Seneca IM

Figure 12: Top five overseas equity positions as at 31 August 2018

Source: Seneca IM

Figures 11, 12, 13 and 14 show the largest positions in each part of the portfolio as at 31 August 2018. Details of the rationale underlying some of these and other positions can be found in QuotedData's previous notes (see page 13 of this note). Many of the names will be familiar to readers of QuotedData's previous notes on SIGT, particularly for the specialist asset and fixed income positions. Some of the more interesting changes are seen within the overseas equities allocation and these are discussed overleaf.

Readers should see page 10 of [QuotedData's June 2018 annual overview note](#) for more information on the HMG Global Emerging Markets Equity Fund. However, both the HMG fund and the other two Asian funds discussed overleaf, have a value approach, good levels of distribution to contribute to the SIGT's revenue income, high active share portfolios (in other words they have portfolios that look quite a bit different to an index benchmark), a small and mid-cap bias to gain exposure to less well-researched areas of the market and a cap on the maximum size of the fund.

Figure 13: Top five specialist asset positions as at 31 August 2018

Source: Seneca IM

Figure 14: All fixed income positions as at 31 August 2018

Source: Seneca IM

The manager applies traditional value investing techniques, to the very small-cap regions of the Asian markets.

The fund is closed to new investment to ensure that it has the widest set of investable opportunities.

Samarang Asian Prosperity Fund

This is an open-ended small-cap pan Asian fund, managed by Greg Fisher at Samarang Capital (www.samarangcapital.com), that invests in listed equities using a **long only strategy**. Greg uses traditional value investing techniques, which he applies to the very small-cap regions of the Asian markets. These companies typically have no analyst coverage and very little interest from professional investors, increasing the opportunity for the manager to find mispriced securities. The fund is around \$400m in size and is hard closed to new investment (when a fund is hard closed, it does not accept new money from new or existing shareholders).

The fund's two largest country exposures are Japan and Vietnam. Tom Delic, Seneca IM's research specialist for 'third-party funds – Asia/emerging', says that Vietnam is interesting because a number of the companies owned within the Samarang portfolio have written down their long-term economic assets to effectively zero (for example, a power plant), yet the equities still trade at or below tangible book value (tangible book value is the total net asset value of a company less intangible assets and goodwill). Tom says that these are not distressed businesses and that they often have minimal or no debt and deliver healthy yields (10%+ in some cases).

The CIM Dividend Income Fund is an open-ended fund with a focus on small-and-mid-cap equities with a value approach.

CIM Dividend Income Fund

Like the Samarang Asian Prosperity Fund, this open-ended fund also has a focus on small-and-mid-cap equities and the size of the fund is similarly limited (currently to around \$180m). The fund is managed by James Morton at CIM Investment Management (www.ciminvest.com), and his team in Singapore/Indonesia, who look for fundamentally sound businesses that have had some sort of temporary fall to the share price, causing the dividend yield to rise. The team then analyses whether the dividend is sustainable, with the aim of providing a bond like return in the form of a 6% yield, along with capital returns when valuations mean revert. This income strategy has been effective – the long-term track record is one of providing a 16% per annum total return including delivering a 6%+ yield to investors since 2001.

The fund's largest exposure is to China, through Hong Kong listings, with real estate an area of interest in recent years.

Performance

Figure 15: Cumulative total return performance to 31 August 2018

	1 month (%)	3 months (%)	6 months (%)	1 year (%)	3 years (%)	5 years (%)	Strategy change*

Peer group and benchmark-beating returns with lower volatility – [click here](#) to see the QuotedData website for up-to-date figures.

Looking at Figure 15, it can be seen that SIGT’s recent performance has been somewhat muted. While this is consistent with the manager’s view and strategy (to shift away from equities as we approach the peak of the economic cycle), this has eaten modestly into SIGT’s long-term performance record (further discussion is provided in the performance attribution section below). SIGT’s NAV and share-price returns are generally behind those of its peer group, the indices and blended benchmark (SIGT’s benchmark became CPI + 6% with effect from 7 July 2017, having previously been Libor + 3% with effect from 18 January 2012) for the periods up to one year.

Given their long-term approach, SIGT’s managers say that its performance is best assessed over longer-term horizons. In fact, the manager considers poor short-term performance to be inevitable from time to time and it should be regarded simply as the cost of good long term performance.

It should also be noted that SIGT has achieved these returns, with lower volatility than the average of its peer group, over all of the time periods provided. Its return volatility has also been lower than that of both the MSCI UK and MSCI World indices (see Figure 16).

Performance attribution

SIGT’s equities underweight exposure has acted as a drag as equity markets have moved up. The underweight exposure should be performance enhancing if equity markets turn.

The manager has provided some performance attribution data, which is summarised in Figure 17. The recent trend has been one of modest underperformance against the benchmark and, looking at the attribution, the bulk of this (for all three time horizons provided) has come from the equities portfolio, and generally from overseas equities. The asset-allocation effect has consistently been minor but reflects SIGT’s ongoing equities underweight and the fact that we are increasingly late cycle. Assuming that the manager’s investment thesis is correct, the equities underweight will be performance enhancing once markets have turned.

Figure 17: Performance attribution (versus benchmark) to 31 July 2018

	Asset allocation 6 months (%)	Stock selection 6 months (%)	Asset allocation 1 year (%)	Stock selection 1 year (%)	Asset allocation 3 years (%)	Stock selection 3 years (%)
UK equities	(0.1)	(0.9)	(0.1)	(1.8)	(0.1)	0.3
Overseas equities	0.3	(1.8)	(0.2)	(2.1)	0.7	(5.1)
Fixed income	0.1	0.1	0.3	0.2	0.7	0.4
Specialist assets	(0.5)	1.5	(0.5)	0.8	0.6	3.9
Cash	(0.3)	0.0	(0.4)	0.0	(1.2)	0.0
Total (Gross asset value)	(1.0)	(1.1)	(0.9)	(2.9)	0.7	(0.5)

Source: Seneca IM, StatPro

Looking within overseas equities, the underweight to North America has been a mild drag on performance as this market has continued to climb, while Europe ex-UK has

tended to drag for more stock-specific reasons. SIGT's underweight to fixed income has aided performance (both in terms of asset allocation and stock selection), while SIGT's allocation to specialist assets has seen good stock selection. This is particularly apparent over the three-year horizon.

SIGT's DCM continues to facilitate stock issuance

As illustrated in Figure 18, SIGT's discount control mechanism (DCM), which went live on 1 August 2016, continues to keep the trust trading close to asset value. (Under SIGT's DCM, the trust actively provides support to the **secondary market**: buying and selling shares as necessary so that it effectively trades at, or close to, a zero discount.) It is designed to give existing and potential shareholders confidence that they can enter and exit SIGT at close to NAV, the DCM should allow SIGT to attract new shareholders and grow its asset base over time, if it continues to provide low-volatility returns that are attractive to investors. Figure 18 illustrates that SIGT's DCM has been successful in this regard.

Figure 18: Premium/(discount) over five years

Source: Morningstar, Marten & Co.

SIGT's number of shares in issue has grown by 9.4% year-to-date, raising £7.33m for the trust.

SIGT's number of shares in issue has grown by 9.5% year to date and 5.6% during the last six months, raising £7.44m and £4.55m respectively for the trust. Net issuance of this scale illustrates that there is demand for SIGT's strategy. The asset growth it has should, all things being equal, serve to lower its **ongoing charges ratio** and further support liquidity, for the benefit of all shareholders.

It should also be noted that, while the overwhelming trend since the introduction of SIGT's DCM has been one of share issuance, the DCM is proven for both issuance and repurchases (see page 8 of [QuotedData's January 2018 update note](#) for more details).

Fund profile

Further information regarding SIGT can be found at Seneca IM's website: senecaim.com

SIGT's aim is to grow both income and capital through investment in a multi-asset portfolio and to have low volatility of returns. Its portfolio includes allocations to UK equities, overseas equities, fixed income and specialist assets.

SIGT is designed for investors who are looking for income, want that income to grow, want the capital of the investment to grow and are seeking consistency or lower volatility in total returns. A pure bond fund could meet the first of those needs and a pure equity fund could meet the first three. SIGT invests across a number of different asset classes with the aim of achieving all four objectives.

Seneca Investment Managers – a multi-asset value investor

Seneca IM is a multi-asset value investor. It takes a team approach

SIGT's portfolio has been managed by Seneca Investment Managers (Seneca IM), and its forerunners, since 2005. Seneca IM describes itself as a multi-asset value investor. (it invests across a range of asset classes using a value orientated approach). We think the combination of multi-asset investing with an explicit value-oriented approach may be unique to Seneca IM. The idea is that Seneca IM can allocate between different asset classes and investments, emphasising those that offer the most attractive opportunities and yields, making asset allocation, direct UK equity and fund selection (for access to other overseas equities and other asset classes) following a value-based approach.

Previous publications

Readers interested in further information about SIGT, such as investment process, fees, capital structure, trust life and the board, may wish to read QuotedData's annual overview note [***Cutting back on equities***](#), published on 21 June 2018, as well as its previous update notes and its initiation note (details are provided in Figure 19 below). You can read the notes by clicking on them in Figure 19 or by visiting quoteddata.com.

IMPORTANT INFORMATION

Marten & Co (which is authorised and regulated by the Financial Conduct Authority) was paid to produce this note on Seneca Global Income & Growth Trust.

This note is for information purposes only and is not intended to encourage the reader to deal

in the security or securities mentioned within it.

Marten & Co is not authorised to give advice to retail clients. The research does not have regard to the specific investment objectives, financial situation and needs of any specific person who may receive it.

This note has been compiled from publicly available information. This note is not directed at any person in any jurisdiction where (by reason of that person's nationality, residence or otherwise) the publication or availability of this note is prohibited.

Accuracy of Content: Whilst Marten & Co uses reasonable efforts to obtain information from sources which we believe to be reliable and to ensure that the information in this note is up to date and accurate, we make no representation or warranty that the information contained in this note is accurate, reliable or complete. The information contained in this note is provided by Marten & Co for personal use and information purposes generally. You are solely liable for any use you may make of this information. The information is inherently subject to change without notice and may become outdated. You, therefore, should verify any information obtained from this note before you use it.

No Advice: Nothing contained in this note constitutes or should be construed to constitute investment, legal, tax or other advice.

No Representation or Warranty: No representation, warranty or guarantee of any kind, express or implied is given by Marten & Co in respect of any information contained on this note.

Exclusion of Liability: To the fullest extent allowed by law, Marten & Co shall not be liable for any direct or indirect losses, damages, costs or expenses incurred or suffered by you arising out of or in connection with the access to, use of or reliance on any information contained on this note. In no circumstance shall Marten & Co and its employees have any liability for consequential or special damages.

Governing Law and Jurisdiction: These terms and conditions and all matters connected with them, are governed by the laws of England and Wales and shall be subject to the exclusive jurisdiction of the English courts. If you access this note from outside the UK, you are responsible for ensuring compliance with any local laws relating to access.

No information contained in this note shall form the basis of, or be relied upon in connection with, any offer or commitment whatsoever in any jurisdiction.

Investment Performance Information: Please remember that past performance is not necessarily a guide to the future and that the value of shares and the income from them can go down as well as up. Exchange rates may also cause the value of underlying overseas investments to go down as well as up. Marten & Co may write on companies that use gearing in a number of forms that can increase volatility and, in some cases, to a complete loss of an investment.
